

209. Life Cycle of a Frog

Eight Posters in two sizes — A4 and A5

The strip contains eight small posters, each with a title and an illustration:

- from tadpole to frog**: Illustration of a green frog.
- Learn from the Pond**: Text: "Froggy and me and the dragon... Our garden pond where it is born... Where in the spring my mum and I... Watch the water's bubbling up... I wonder if the water's clean... Do they go eating it and the... That's how they will be eating legs... Do you know why?... Clean they'll be people... By the pond dragon!" Illustration of a pond with a dragon.
- Froggy lay their eggs in ponds**: Illustration of frog eggs in a pond.
- The eggs are called frog spawn**: Illustration of frog spawn.
- The tadpoles start to look more like their frogs**: Illustration of a tadpole.
- They become tiny dragons**: Illustration of a small frog.
- low quality samples only**: Illustration of a frog in a pond.

As the tadpoles get bigger they start to grow back legs. Then they grow front legs.

Their tails start to shrink.

The poster features a large photograph of a pond with a tadpole and a frog. Below the text are three illustrations of tadpoles at different stages of development, showing the growth of legs and the shrinking of the tail. To the right is a vertical sequence of eight small illustrations showing the complete life cycle from egg to adult frog.
