

**Dusty knew that.....**

1. Drums are part of a family of instruments called **percussion instruments**.
2. Drums make sounds when they are **hit** or **tapped** using **hands, drumsticks** or a **special beater**.
3. When a drum skin is **shaped** or hit it wobbles which means it **vibrates**. When it vibrates we **hear** the sound.

Dusty thought about the next bit of his report. His spidergram was growing!

**Dusty knew that.....**

1. Drums are made in many different **shapes and sizes**.
2. Drums make **different sounds** because of their shape, the materials they are made from and the way they are hit.
3. The way a drum is hit (**hard or gently**) and what it is hit with, can change the sound it makes.
4. Some sounds are **high** and some sounds are **low**.
5. **Bongos** are two drums that are joined together. The two drums make **different sounds** because one drum is smaller than the other.

**Now Dusty's spidergram was finished.**

But what about his report?

Pod told Dusty that he could use his spidergram to help him write his report.

But, he still had to write his report and .....that's another story!
